

Sterilization Solutions

Euro Clinical Service

Our products are the result of the highest expression of the Italian inventiveness and technological research in the field of sterilization. Sterilization is an essential requirement for the success of any surgical procedure and for the reduction (elimination) of nosocomial infections diffusion.

The continuous development along with the constant technological innovation and the attention to quality reference standards for both products and manufacturing processes bring **ECS srl** to be one one of the leading company in this field.

ECS srl addresses to all those who have made **PERFECTION** their main principle.

“STERIDIAMOND” STERILIZATION FLAT REELS

- Flat rolls imprints are performed outside the packing area, along the welding line, between paper and film, to prevent ink from migrating to the product.
- Transparent green film grants the prompt identification of the content.
- The film is reinforced in order to avoid any tear upon roll opening.
- High quality “medical grade” paper with 60 or 70 gsm.
- Three-line sealing with strong strength and effective spacing grants a perfect adhesivity during sterilization process and an excellent fibre-free and tear-free peeling during opening.
- Steam and EO process indicators.
- Formaldehyde process indicator is available upon request.
- ISO 11140 certified inks are water based and non-toxic.
- All materials comply with international standards.
- Opening direction is clearly marked.
- Validated production process.
- Each roll is wrapped in a protective film and placed in the packing carton to ensure protection against dust even after opening of the box.
- Suitable to be used with all types of sealing machines.

“STERIPLASMA” TYVEK® FLAT REELS

- Tyvek® flat rolls are suitable for EO, gamma and VH₂O₂ sterilization.
- Tyvek® flat rolls are manufactured from medical plastic transparent film and Dupont Tyvek®, which grants an excellent microbial barrier, tear resistance and perfect peeling.
- Tyvek® flat rolls imprints are performed outside the packing area, along the welding line, to prevent ink from migrating to the product.
- Three-line sealing with strong strength and effective spacing grants a perfect adhesivity during sterilization process and an excellent fibre-free and tear-free peeling during opening.
- Under controlled conditions, Tyvek® can be used in steam sterilizer to max 127°C for 30 minutes.
- Welding temperature: max 125°C.
- ISO 11140 certified inks are water based and non-toxic.
- All materials comply with international standards.
- Opening direction is clearly marked.
- Validated production process.
- Each roll is wrapped in a protective film and placed in the packing carton to ensure protection against dust even after opening of the box.
- Suitable to be used with all types of sealing machines.

STERIPLASMA TYVEK® FLAT REELS

“STERIPLASMA” TYVEK® FLAT POUCHES

- Tyvek® flat pouches are suitable for EO, gamma and VH₂O₂ sterilization.
- Tyvek® flat pouches are manufactured from medical plastic transparent film and Dupont Tyvek®, which grants an excellent microbial barrier, tear resistance and perfect peeling.
- Tyvek® flat pouches imprints are performed outside the packing area, along the welding line, to prevent ink from migrating to the product.
- Three-line sealing with strong strength and effective spacing grants a perfect adhesivity during sterilization process and an excellent fibre-free and tear-free peeling during opening.
- Under controlled conditions, Tyvek® can be used in steam sterilizer to max 127°C for 30 minutes.
- Welding temperature: max 125°C.
- ISO 11140 certified inks are water based and non-toxic.
- All materials comply with international standards.
- Opening direction is clearly marked.
- Validated production process.
- Flat pouches are packed in plastic bags and placed inside a cardboard box.
- Packs of 100 or 200 pieces are available according to Customer needs.
- Plastic packing ensures protection against dust even after opening of the box.

STERIPLASMA TYVEK® FLAT POUCHES

SPECIAL PACKAGING: “INSERT POUCHES” FLAT POUCHES WITH TYVEK® INSERT

- Tyvek® insert pouches are suitable for EO and gamma sterilization.
- Tyvek® insert pouches are manufactured from a transparent or white polyethylene film (HDPE) with a special flap in Dupont Tyvek®.
- Thanks to their dimensions, Tyvek® insert pouches are suitable for Custom Pack sterilization.
- Dupont Tyvek® grants an excellent microbial barrier, tear resistance and perfect peeling.
- All materials comply with international standards.
- Opening direction is clearly marked.
- Validated production process.
- Tyvek® insert pouches are packed in plastic bags and placed inside a cardboard box.
- Plastic packing ensures protection against dust even after opening of the box.

SPECIAL PACKAGING: “STERIBLUE” TNT BLUE POUCHES

- TNT (tissue-non-tissue) is an innovative material, soft and strong at the same time, allowing excellent resistance to microbial penetration during steam and EO sterilization.
- TNT Blue pouches are suitable for the packaging of heavy and bulky objects.
- TNT Blue pouches are manufactured from a transparent plastic medical film and from TNT, which grants high strength against burst and humidity.
- TNT Blue pouches imprints are performed outside the packing area, along the welding line, to prevent ink from migrating to the product.
- Three-line sealing with strong strength and effective spacing grants a perfect adhesivity during sterilization process and an excellent fibre-free and tear-free peeling during opening.
- ISO 11140 certified inks are water based and non-toxic.
- All materials comply with international standards.
- Opening direction is clearly marked.
- Validated production process.
- TNT Blue pouches are packed in plastic bags and placed inside a cardboard box.
- Packs of 100 or 200 pieces are available according to Customer needs.
- Plastic packing ensures protection against dust even after opening of the box.
- Suitable to be used with all types of sealing machines.

SBPTNT - TNT BLUE POUCHES

TNT BLUE POUCHES

SPECIAL PACKAGING: “COVER POUCHES” FILM/SELF-SEALING POUCHES

- Self-sealing film pouches are particularly suitable for the packaging and storage of materials even for long periods in dusty areas, as the plastic surface is fully sealed and waterproof.
- Transparent green film grants the prompt identification of the content.
- Reinforced film to avoid tearing of the plastic material.
- Self-sealing film pouches do not require the use of thermosealers because they are equipped with a non-toxic adhesive strip specific for sterilization processes.
- Never use inside autoclaves because they are fully sealed and waterproof.
- Recommended for use as a second packaging after the sterilization process.
- High resistant sealing.
- All materials comply with international standards.
- Validated production process.
- Self-sealing film pouches are packed in plastic bags and placed inside a cardboard box.
- Plastic packing ensures protection against dust even after opening of the box.

SELF-SEALING PROTECTIVE POUCHES

SPECIAL PACKAGING: “PAPER POUCHES” PAPER/PAPER GUSSETED POUCHES

- Paper/paper pouches are manufactured from high quality “medical grade” paper with 60 gsm.
- Double longitudinal and transversal sealing ensures an excellent tightness during sterilization process.
- Chemical indicator for steam sterilization.
- ISO 11140 certified inks are water based and non-toxic.
- All materials comply with international standards.
- Opening direction is clearly marked.
- Validated production process.
- Pouches are packed in plastic bags and placed inside a cardboard box.
- Plastic packing ensures protection against dust even after opening of the box.
- Suitable to be used with all types of sealing machines.

All sizes only available on demand.

SHEET PACKAGING: “STERIL SHEET BLU” TNT

- TNT is suitable for wrapping the packs to be sterilized with steam, EO and radiation sterilization processes.
- TNT is composed of synthetic fibers and wood pulp, both able to grant a good flexibility, drapability and liquid repellence.
- Compliance with international standards.
- TNT is packed in plastic bags and placed inside a cardboard box.
- Plastic packing ensures protection against dust even after opening of the box.
- Blue colour.

SHEET PACKAGING: “STERIL SHEET CREPED PAPER” CREPED PAPER

- Steril sheet medical grade creped paper grants high resistance and excellent drapability.
- It is suitable for wrapping the packs to be sterilized with steam processes.
- Perfect barrier against microbial contamination.
- Completely waterproof, it allows a high resistance during sterilization.
- Compliance with international standards.
- Steril sheet medical grade creped paper is packed in plastic bags and placed inside a cardboard box.
- Plastic packing ensures protection against dust even after opening of the box.
- Green, blue.

For the complete range
 of products visit our website
www.ecssrl.com

TNT

CREPED PAPER

SMS

SHEET PACKAGING: “SMS BLU” SMS

- BLUE SMS is a three-layer polypropylene suitable for the packaging to be sterilized with steam or VH_2O_2 processes.
- BLUE SMS grants an excellent resistance to microbial penetration, strength and stability during the sterilization cycle, minimizing water condensation.
- Compliance with international standards.
- BLUE SMS is packed in plastic bags and placed inside a cardboard box.
- Plastic packing ensures protection against dust even after opening of the box.
- Blue colour.

STERILIZATION CONTROL: “BOWIE & DICK PACK”

- Air leaks inside the autoclave represent a serious threat for the validation of the sterilization process. However, this problem can be solved through the daily use of the Bowie & Dick test pack, as provided by international standards in force.
- Disposable pack for the daily Bowie & Dick test is suitable for the control of steam penetration and air removal from the autoclaves during steam sterilization.
- Unlike traditional devices, the use of Bowie & Dick test pack offers consistent advantages that ensure the validation of each test and the immediate detection of air removal during the sterilization.
- Bowie & Dick test pack is a safe and reliable product.
- It can immediately detect any problem occurring during the Bowie & Dick cycle.
- Test sheet will remain flat after the sterilization cycle.
- External chemical indicator permits the prompt identification of processed

REF. EC.STEAM 98

REF. EC.STEAM 98 S

STERILIZATION CONTROL: “EC.STEAM 98.1-R” REUSABLE BOWIE & DICK TEST

- Reusable test pack for the control of steam penetration and air removal inside the autoclaves during steam sterilization
- Safe and reliable product in compliance with standards in force
- Each package contains a user-friendly test sheet for data storage
- The kit can be utilized 25 times before disposal
- The kit is composed of two sets of reusable porous sheets, a process indicator for steam monitoring and relative test storage card usable up to 25 times.
- Reusable stainless steel basket with clamp.

packs.

- The materials are full recyclable and the process indicator is non-toxic.
- Full conformity to standards in force.
- Easy-to-read test sheet clearly identifies failures and can be filed for record keeping.
- 20 pcs/pack.

VAPOR CONTROL STERILIZATION CONTROL INTEGRATOR

VAPOR CONTROL integrator is a single-use indicator for accurate control of the sterilization autoclave cycles. It is suitable for sterilization control of wrapped and non wrapped instruments, packages and other items. The three fundamental and critical factors for development of autoclave sterilization are:

- Exposure time
- Exposure temperature
- Pressure in the presence of saturated steam

A successful sterilization is checked by an easy readout of the progress of a migrant bar enclosed inside a plate made up of a lamina in transparent plastic film and of a semi-rigid aluminum lamina, this expedient prevents accidental contact of the reagent with the contents of load:

- Red area (REJECT): sterilization conditions not reached
- Green area (ACCEPT): sterilization conditions reached

REF. VAPOR C

VAPOR CONTROL (ref. VAPOR C): packs of 250 pieces.

CHEMICAL INDICATORS: “EC.POINT” ADHESIVE PROCESS INDICATOR

- Adhesive process indicator for the control of steam sterilization.
- EC-POINT identifies processed packs at a glance.
- Full conformity to standards in force.
- EO, DRY, VH₂O₂, Form, Radiation indicators upon request.
- 1000 pcs/box.

REF. EC.POINT

STERILIZATION CONTROL: “EC.STEAM 98.2” BOWIE & DICK TRADITIONAL SHEET

- Disposable traditional sheet for the daily Bowie & Dick test is suitable for the control of steam penetration and air removal from autoclaves during steam sterilization.
- Each sheet provide lot number, date of production, expiring date, supplier's name and brand, product code and data records.
- Test sheet will remain flat after the sterilization cycle.
- The materials are full recyclable and the process indicator is non-toxic.
- Full conformity to standards in force.
- Traditional sheet dimensions: A4 50 pcs/pack - 1000 pcs/box.

STERILIZATION CONTROL: "HELIX TEST" HELIX TEST

- Helix test evaluates the capacity of penetration of the sterilization agent (steam, VH_2O_2 , EO, formaldehyde) inside hollow loads.
- Air and any other non-condensing gases shall be removed from the sterilization chamber before the sterilizing agent comes into contact with the devices to be processed so that the test result is not adversely affected.
- Helix test is suitable for any sterilization process in a loaded autoclave.
- Suitable to be used with all types of autoclaves.
- Full conformity to standards in force.
- N. 1 Helix with 25, 50, 100, 250 strips.

STERILIZATION CONTROL: "EC.STEAM 98.4" STEAM STERILIZATION INTEGRATOR

- Integrators for the control of steam sterilization. Integrators evaluate the effectiveness of the process and exposure to sterilization parameters (time - temperature - saturated steam concentration) to fulfill the steam sterilization cycle at 121°C and 134°C.
- Integrators are completely laminated to prevent ink from migrating to the product and to preserve test result.
- Reliable and easy to use. Non-toxic chemical indicator.
- Full conformity to standards in force.
- Class 4.
- 250 pcs/box.

STERILIZATION CONTROL: "EC.STEAM 98.3-L" STEAM STERILIZATION INTEGRATOR

- Integrators for the control of steam sterilization. Integrators evaluate the effectiveness of the process and exposure to sterilization parameters (time - temperature - saturated steam concentration) to fulfill the steam sterilization cycle at 121°C and 134°C.
- Integrators are completely laminated to prevent ink from migrating to the product and to preserve test result.
- Reliable and easy to use. Non-toxic chemical indicator.
- Full conformity to standards in force.
- Class 5.
- 250 pcs/box.

AVAILABLE ON DEMAND: EC.STEAM 98.3LAD (ADHESIVE).

HELIX TEST - HELIX TEST SYSTEM

Safety margin comparison between a biological indicator and a Class 5 indicator is shown in the above performance curve

STERILIZATION CONTROL: “PERFORMER” - SEQUENTIAL INTEGRATOR

- Three phase sequential integrator for the control of steam sterilization both in high vacuum or gravity air removal autoclaves. Suitable for steam sterilization cycles at 121°C and 134°C.
- PERFORMER indicator is completely laminated to prevent ink from migrating to the product and to preserve test result
- Thanks to its three process indicators, PERFORMER is more than a simple indicator.
 The first indicator turns its color to confirm the beginning of the sterilization process, the second indicator turns its color to confirm the end of the sterilization process, the third indicator turns its color to exhibit over-exposure. Under normal conditions all three indicators completely turn their color during sterilization process. In case the third indicator doesn't change, the operator shall ask for autoclave technical assistance. Non-toxic chemical indicator.
- Full conformity to standards in force.
- Class 5.
- 250 pcs/box.

REF. PERFORMER

REF. PERFORMER EXTENDER

AVAILABLE ON DEMAND: PERFORMER WITH EXTENDER.

STERILIZATION CONTROL: “STERIL-TEST 6” - SEQUENTIAL EMULATOR

- Two phases sequential integrator for the control of steam sterilization both in high vacuum or gravity air removal autoclaves.
- Suitable for steam sterilization cycles at 121 °C and 134 °C.
- STERIL-TEST 6 indicator is completely laminated to prevent ink from migrating to the product and to preserve test result
- Thanks to its two process indicators, STERIL-TEST 6 is more than a simple indicator. The first indicator turns its color to confirm the beginning of the sterilization process and the second indicator turns its color to confirm the end of the sterilization process.
- Full conformity to standards in force.
- Class 6.
- 250 pcs/box.

REF. STERIL-TEST 6

STERILIZATION CONTROL: “EC.PRION 98.6” - SEQUENTIAL EMULATOR

- Sterilization emulator integrator evaluates the effectiveness of the sterilization process and exposure to sterilization parameters (time - temperature - saturated steam concentration). Steam sterilization cycles at 134°C for 18 minutes. Heat-resistant paperboard.
- Non-toxic chemical indicator. The printed side of the indicator is completely laminated to prevent ink from migrating to the product and to the operator.
- Class 6.
- 250 pcs/box.

REF. EC.PRION 98.6

STERILIZATION CONTROL: “EC.PLASMA” VH₂O₂ INTEGRATOR

- Chemical indicator to be used inside each load to be sterilized.
- The chemical indicator evaluates the effectiveness of the sterilization process and exposure to VH₂O₂ sterilization.
- Non-toxic chemical indicator will change its color to identify processed packs at a glance.
- Full conformity to standards in force.
- Class 4.
- 250 pcs/box.

REF. EC.PLASMA

STERILIZATION CONTROL: “EC.OXIDE 98.E1L” EO CHEMICAL INTEGRATOR

- Chemical integrator EC.OXIDE 98.E1L is a laminated paperboard strip suitable for EO sterilization.
- Chemical EO indicator evaluates the effectiveness of the sterilization process and exposure to sterilization parameters (temperature - time - EO concentration).
- Chemical indicator will turn its color upon exposure to EO sterilization cycle.
- Non-toxic chemical indicator.
- Full conformity to standards in force.
- Class 5.
- 250 pcs/box.

REF. EC.OXIDE 98.E1L

STERILIZATION CONTROL: “EC.FORM” FORMALDEHYDE CHEMICAL INDICATOR

- The chemical indicator evaluates the effectiveness of the sterilization process and exposure to Formaldehyde sterilization.
- Non-toxic chemical indicator will change its color to identify processed packs at a glance.
- Full conformity to standards in force.
- Class 4.
- 250 pcs/box.

REF. EC.FORM

CLEANING PERFORMANCE: "EC.WASHTEST" CLEANING PERFORMANCE TEST/WASHING INDICATOR

- Chemical indicator evaluates the effectiveness of thermo-disinfectors and controls the cleaning conditions in the automatic washing machines.
- The non-toxic chemical reagent dissolves with most of the cleaning agent and is swept along with the washing fluid.
- 250 pcs/box.

REF. EC.WASHTEST

CLEANING PERFORMANCE: "WT HOLDER" WASH TEST HOLDER

- Holder for Wash Test
- Made of stainless steel
- Highly resistant to corrosion and abrasion

CLEANING PERFORMANCE: "ULTRASONIC CHECK" ULTRASONIC CLEANING INDICATOR

- Ultrasonic cleaning processes (cavitation) allow disinfection even in areas difficult to access by other cleaning methods. This indicator verifies the effectiveness of the ultrasonic washing equipment.
- Ready to use either with or without detergents and cleaning solutions.
- Insert in the machine for at least 3 minutes between 18-70 ° C.
- Extremely reliable and stable product.
- Rapid read-out.
- 30 pcs/box.

REF. ULTRASONIC CHECK

CLEANING PERFORMANCE: "PROTEIN CONTROL" SURFACE CONTROL

- An accurate disinfection ensures a reduction in bacterial growth and resulting nosocomial infections.
- This system is able to detect any proteins and allergens on the surfaces after the cleaning process.
- High-reliable and high-sensitive product.
- Intuitive interpretation of the result.

REF. PROTEIN CONTROL

Our biological systems BIO-CHECK are conceived to control the effectiveness of the sterilization process. BIO-CHECK Biological indicators are recommended for the different sterilization cycles: steam, VH₂O₂, EO and formaldehyde.

BIO-CHECK Biological indicators contain bacterial spores coated on a paper strip enclosed in a plastic vial along with growth medium contained in a crushable glass ampoule. The special filter cap allows sterilant to penetrate into the plastic vial. Certification is included in each box.

BIOLOGICAL INDICATORS: "BIO-CHECK" BIOLOGICAL INDICATOR FOR STEAM

- Biological indicator for the validation of steam sterilization process.
- Spore strip: Geobacillus Stearothermophilus.

REF. BIO-CHECK 98.B4

REF. BIO-CHECK 98.B1

REF. BIO-CHECK 98.B5

BIOLOGICAL INDICATORS: "BIO-PACK" BIOLOGICAL PACK FOR STEAM

- Disposable biological pack for steam autoclave containing:
 - n. 1 biological indicator.
 - Spore strip: Geobacillus Stearothermophilus.
 - n. 1 test-card with process indicator for data recording.
 - n. 1 barrier sheets made from pure paper pulp.
- process indicator.
- instructions for use.
- BIO-PACK is a safe and reliable product for the validation of steam sterilization process.
- Available also with vapor C

RAPID BIOLOGICAL INDICATORS: "BIO-CHECK 98.B3" BIOLOGICAL INDICATOR FOR EO

- Rapid - After 4h
- Biological indicator for the validation of EO sterilization process.
- Spore strip: Bacillus Atrophaeus.
- Final read-out: after 48 hours of incubation.
- 50 pcs/box.

REF. BIO-CHECK 98.B3

“INCUBATOR OBY” - STANDARD BIOLOGICAL INCUBATOR

- Suitable for the incubation of biological incubators.
- Incubator temperature can be choose and adjust before starting to work 37 or 60 ±2 °C
- Incubation temperature can be selected through the temperature switch on the incubator.
- Incubators are manufactured from high-quality materials and are user-friendly.

Available a smaller version with 3 holes: Incubator 3.

REF. INCUBATOR OBY

REF. INCUBATOR 3

“CARONTE” – BIOLOGICAL INCUBATOR

- Suitable for the incubator of all type rapid and standard biological indicator
- 2 test benches working at different temperature at the same time
- After planning all the necessary information with no intervention by the operator will be required
- Work with a software directly without need of external connections

THERMOMETER FOR INCUBATOR

- Glass thermometer for the control of biological incubator temperature.

REF. THERMOMETER

REF. CARONTE

Our tapes provide excellent wrapping and securing of sterilization packs. • They allow immediate identification of processed packs.
 • Available with color change indicator. • Manufactured from high-quality materials, our tapes grant strong seal strength during sterilization cycle

ADHESIVE TAPES: “V19” STEAM ADHESIVE TAPE

- Adhesive tape for steam sterilization process. V19 comes in semi-creped flexible paper support printed with process indicator.
- Rubber-based adhesive that provides perfect sealing at high temperature and humidity. It can be used on paper, plastic, metal, woven and non-woven.
- A special indicator printed on the tape changes its color from yellow to brown upon exposure to sterilization cycle.
- After use, the tape can be easily removed without leaving traces on the surface.
- Each tape is single-packed.
- Suitable for sterilization
- 48 pcs/box.
- Tape available sizes: 12mm (upon request), 19 mm (standard) and 25 mm.

ADHESIVE TAPES: “V19HTB” STEAM HIGH-ADHESIVE TAPE

- V19HTB High-adhesive tape provides excellent wrapping and securing of sterilization packs for steam sterilization process. V19HTB comes in flexible paper support printed with process indicator to allow immediate identification of processed packs.
- A special indicator printed on the tape changes its color from white to brown upon exposure to sterilization cycle.
- Aggressive adhesive makes the tape suitable to be used on any surface, ie silicon coated paper.
- Available in blue color.
- Each tape is single-packed.
- Suitable for sterilization.
- 48 pcs/box.
- Tape Size: 19 mm.

AVAILABLE UPON REQUEST.

ADHESIVE TAPES: “P25” VH₂O₂ ADHESIVE TAPE

- Adhesive tape for VH₂O₂ sterilization process. P25 comes in plastic support printed with process indicator.
- Adhesive is manufactured with natural rubber resins that provide perfect sealing at high temperature and humidity.
- Each tape is single-packed.
- Suitable for sterilization.
- 45 pcs/box.
- Tape Size: 25 mm.

ADHESIVE TAPES: “G19” EO ADHESIVE TAPE

- Adhesive tape for EO sterilization process.
- G19 comes in flexible paper support printed with process indicator to allow immediate identification of processed packs. It provides excellent wrapping and securing of sterilization packs for steam sterilization process.
- A special indicator printed on the tape changes its color from brown to green upon exposure to sterilization cycle.
- Each tape is single-packed.
- Suitable for sterilization.
- 48 pcs/box.
- Tape Size: 19mm.

ADHESIVE TAPES: “S19” DRY HEAT ADHESIVE TAPE

- Adhesive tape for Dry heat sterilizer process equipment (commonly known as dry heat sterilizer or poupinel) S19 comes in flexible white paper support printed with process indicator to allow immediate identification of processed packs. It provides excellent wrapping and securing of sterilization packs for steam sterilization process.
- A special indicator printed on the tape changes its color from green to brown upon exposure to sterilization cycle.
- Each tape is single-packed.
- Suitable for sterilization.
- 48 pcs/box.
- Tape Size: 19mm.

ADHESIVE TAPES: “MT19/25/50” MASKING TAPE

- Adhesive tape for steam sterilization process made of flexible semi-creped paper.
- Adhesive is manufactured with natural rubber that provide perfect sealing at high temperature and humidity. It can be used on paper, plastic, metal, woven and non-woven.
- Suitable for sterilization.

ADHESIVE TAPES: “H19/H25/H50” TAPE DISPENSER

AVAILABLE UPON REQUEST.

MT - MASKING TAPE

THERMOSEALER: “EC.SEALER” ROTARY THERMOSEALER STANDARD

- Rotary heater suitable to seal pouches and rolls for hospital, dental and medical use.
- Excellent sealing performance with any packaging you need.
- Technical specification upon request.
- Thermosealer with digital timer
- Temperature control from 20-200 +/-2%
- Work condition +5° to +40°
- Automatic starting and power off when the device is not in use.

THERMOSEALER: “SEAL TEST and CM/IND” SEALING CONTROL TEST

- “Seal test” is a daily test for the validation of sealing quality.
- “Seal test” is a quick and easy-to-use product.
- “Seal test” allows operators to verify the quality of their rotary heater.
- 30/60/250 pcs/box.

WORKSTATION: “WORKSTATION 1 AND 2” WORK BENCH

- The workstation is a station with adjustable height to be used in the sterile packing area of sterilization facilities.
- It can be static or mobile.
- It is also a work bench used to control and verify the surgical instruments and the textile items and to pack the loads to be sterilized. It can be positioned between the washing and the sterilization area.
- It can be completed with monitor, keyboard and mouse support in case you need to follow the traceability of the sterilization kits.
- Height adjustability always provide a good ergonomic support for the operator's best comfort.
- Available in different sizes and versions.
- The workstation can be customized with a wide range of equipment for the inspection and packing: roll dispenser with cutter, rolls holder, shelves, drawers, baskets, 220V sockets data storage unit, automatic cut-out, etc.

ACCESSORIES: “EC.SEAL” PAPER SEAL FOR CONTAINER with indicator

- Paper seal with indicator for container.
- EC-SEAL is used to seal containers, ensuring that the container is not accidentally opened or tampered with.
- On the label you can record: lot number, content description, sterilization date, expiring date, operator's name.
- 1000 pcs/box.

ACCESSORIES: “ECS2009/IND” PLASTIC SEAL FOR CONTAINER with indicator

- Plastic seal with indicator for container.
- ECS2009/IND is used to seal containers, ensuring that the container is not accidentally opened or tampered with.
- 1000 pcs/box.

ACCESSORIES: “ECS2009” PLASTIC SEAL FOR CONTAINER without indicator

- Plastic seal for container.
- ECS2009 is used to seal containers, ensuring that the container is not accidentally opened or tampered with.
- 5000 pcs/box.

ACCESSORIES: “EC.LABEL 98.5” CONTAINER LABEL

- Paper label with process indicator to place outside each container for an easy identification of the content.
- On the label you can record: packaging date, sterilization expiring date, autoclave details, lot number, operator's name.
- Printed with process indicator to allow immediate identification of processed packs.
- EC.LABEL 98.5 can be used with all containers.
- 250 or 500 pcs/box.

ACCESSORIES: “EC.LABEL 98.5AD” ADHESIVE CONTAINER LABEL

- EC.LABEL 98.5AD presents the same features as the container label EC.LABEL 98.5 but, thanks to its adhesive surface, once removed from the container, it can be attached to the patient's medical record or to sterilization process record sheet.
- 250 or 500 pcs/box.

ACCESSORIES: "ABS-TL" ABSORBENT TRAY-LINER

- Absorbent tray-liner has been conceived to reduce moisture and condensation inside the container during sterilization process.
- Placed on the bottom of the container, it can be adapted to every surface.
- Due to its special features and the high degree of absorption, it can be safely used during sterilization to absorb and rapidly disperse condensate for complete evaporation.
- It can also be used next to delicate items to avoid damages to instruments.
- Absorbent tray-liner comes in many sizes.
- Single or multi-layer use depending on the degree of moisture inside the container.
- It provides excellent protection all over the whole packaging.
- It is suitable for steam, formaldehyde, EO and VH_2O_2 sterilization.

ACCESSORIES: "TAI/ECS" AUTOCLAVE PROTECTION GLOVES

- Heat resistant gloves made of split leather.
- Autoclave protection gloves protect operator's hand when handling hot surfaces from autoclaves or ovens.
- Lining: denim cotton.
- Wrist: split leather cm 14.
- One-size-fits-all.

REF. TAI/ECS

ACCESSORIES: "TREAD STEP" DECONTAMINATION CARPET

- TREAD STEP can be safely used before entering surgery rooms, labs, clean rooms and wherever you need to remove contamination and keep high hygiene standards.
- TREAD STEP carpet includes thirty sheets in low-density polyethylene plastic film.
- Non-toxic adhesive in aqueous suspension that leaves no traces on soles, wheels, etc.
- It reduces the microbial/fungal transmission acting as anti-bacterial and anti-dust barrier.
- Sheets are numbered from 30 to 1.
- Box containing 5 carpets with 30 sheets each.
- Available in blue (standard), green or white (upon request).

ACCESSORIES: "T/S B" DECONTAMINATION CARPET FRAME

- The frame for decontaminating carpet offers perfect stability to the carpet and it is easy to move during room cleaning.
- Recommended wherever you need to use the decontamination carpet.

ACCESSORIES: "ABS-CARPET" ABSORBENT CARPET

- Thanks to its special surface with funnel-shaped micropores, the Absorbent carpet allows the liquids penetration and absorption of liquids.
- Cleaning will take less time.
- It can be used in surgery rooms, sterilization units, washing departments, etc.
- The product can be easily discarded.
- It comes in three different models.

SERVICES FOR MEDICAL INDUSTRY: “MEDICAL PAPER”

- Suitable to be used for the production of rigid and flexible blisters.
- Suitable for steam, EO, irradiation and VH_2O_2 sterilization cycles.
- Customized printing with or without process indicator is available upon request.
- Available in any grammage, length and width according to Customer needs.

SERVICES FOR MEDICAL INDUSTRY: “MEDICAL FILM”

- Composed of laminated film (Pe/Pet, Pp/Pet, Pa/Pe, Pp/Pe).
- Suitable for steam, EO, irradiation and VH_2O_2 sterilization cycles.
- It can be used with any packaging and blistering machine.
- Available in any grammage, length and width according to Customer needs.
