

Kartell LABWARE

At the end of the 1950s, the evolution in technological design experimentation leads, with great intuition, to the creation of the **Labware Division** for the supply of technical articles for laboratories; a division able to make the best use of materials such as polypropylene, polystyrene, polyethylene to offer plastic as a valid alternative to glass due to its lightness, strength, economy, and safety.

Having always favoured quality and the use of advanced technologies, offering a wide range of products, widely distributed by a network of international dealers, make the Kartell image and name recognized worldwide.

Many are the valued products included in **Kartell Labware** portfolio. Among them:

- Cylindrical and square bottles with wide or narrow neck
- Wash bottles and cylindrical jars with ribbed cap
- Carboy bottles with or without spigot
- Volumetric products, including graduated cylinders and jars

The continuous search for high quality standards allowed the company to certify a lot of products as suitable for foodstuff according to the latest regulations in force.
