

RI.MOS.

Disposable Medical Products

RI.MOS. investment returns to global events and medical fairs

A POSITIVE 2022 OUTLOOK

"MEETING AGAIN, GROWING TOGETHER"

2022 Goals: "Setting the FAIR agenda, launching new products"

Mirandola, October 2022 – Events are back! RI.MOS. is more than glad to confirm its annual, relentless, presence to key world medical fair events, opening with Arab Health in January, following with SIVE, SINGAPORE VET, CPhI and MEDICA this late fall. Not only fairs, but business trips and trainings too from Guatemala to Saudi Arabia and Malaysia to visit former and new customers during this present year.

Meeting in person still represents one unique moment to share Corporate values and Product experience. While having had the time to sharpen its portfolio tools during the last two years, it is in this 2022 that RI.MOS. has finally opened to a new storytelling of its ten-year Medical Device Hyperoil and of OTC Hypermix for vet field, adding Kanarescue, a cbd complete line of oils and soaps, to the picture.

Herbal based products, OTC non-prescription ointments, Made in Italy R&D, multi-target strategies are among the ideas and tools that RI.MOS. is promoting both online and in person, having learnt from the covid experience, but already looking forward to the future.

We can't wait for this upcoming annual gathering at MEDICA Dusseldorf 2022 to display our know-how and to get together again with our old and new partners!

Founded in 1985 under the name RAM, as the world's first manufacturer of disposable multi-injectors for mesotherapy. In 1988, the name changed to RI.MOS., a brand recognized in Italy and abroad in the fields of mesotherapy and gynaecology disposables, respectively under the brands MESORAM and GINRAM. In 1999, RI.MOS. began to develop new disposable products for assisted fertilization under the FERTIRAM brand. In 2000, RI.MOS. acquired PAIS, an Italian company specialized in designing and manufacturing metal needles and reusable cannulas. In 2005, the Company introduced a new range of products under the AGORAM brand, which includes disposable needles for soft and hard tissue biopsy. In the same year, it acquired the patent license for a plant-based product for veterinary and human use that eases tissue regeneration. In 2008, the product obtained CE certification as Medical Device Class IIb. In 2009, the vet line entered national and international markets under the brand HYPERMIX. In 2010, the human line entered the national market under the brand HOLOIL –and international market under the brand HYPEROIL. Following their success, in 2013, the HOLOIL SYSTEM brand was created, gathering all plant-based products (medical devices and cosmetics) manufactured by RI.MOS. Export quota is 51% of the total turnover with sales managed through distributors located in over 90 countries.
